## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-20 are allowed over prior art of record.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record, Attias (US Patent No. 6185309), teach a convolutional mixing method for blind source separation of mixed and convolved sources arrived at different sensors at different times due to propagation delays (*col. 9, ln. 51-67*). A convolutive mixing model is created composing filter matrix consisting of a series of mixing matrices, one for each time point  $m$  and includes elements representing the maximum number of detectable delayed version denoted as filter length  $M$  (*col. 10, ln. 1-30*). The model source spectra and mixing filters are optimized and are used to derive the update rules to better separate convolutive mixtures (*col. 12, ln. 1-20*). Attias, however, fails to specifically disclose that a method using convolutional mixing independent component analysis to separate the target sound source signal from a number of sound input devices. Attias also fails to specifically disclose the use of a priori knowledge in the convolutional methodology of ICA. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to incorporate the teaching of the claimed invention in Attias. Therefore, claims 1-20 are allowed over prior art of record.
